Introduction

Today:

- ▶ Recap, and where we stood before the summer.
- ▶ Simulations Results.
- ▶ Where we heading.

Map

The Code

```
class KDgrid:  
    def __init__(self, n, k, celldim=2, checksdim=0,
```

How to Read

side-length :[8, 16, 20, 30, 30, 30, 30]
grid dim :[3, 3, 3, 3, 3, 3, 3]
error rates :[0.001]
error accumulation :False

Ideal Result.

colors

In red, No accumulation of errors. In blue decoding in the presence of noise.

Majority

Alg.

Each bit looks at its neighbour checks, if the majority of them is unsatisfied, then it flip itself.

Justification.

Was suggested in Dennis.

Bottom line.

- ▶ Fails to correct, even in the absence of noise.
- ▶ Collisions.
- ▶ Gives better result when requiring $(\frac{1}{2} + \mu)$ -majority.
